Accounting Information Systems 1e covers the four roles for accountants with respect to information technology:

1. Users of technology and information systems,
2. Managers of users of technology,
3. Designers of information systems, and
4. Evaluators of information systems. Accountants must understand the organisation and how organisational processes generate information important to management. Richardson's focus is on the accountant's role as business analyst in solving business problems by database modeling, database design, and business process modeling. Unlike other texts that provide a broad survey of AIS related topics, this text concentrates on developing practical, real-world business analysis skills.

Book I received was missing page 179,180. Other than that odd fact, it's okay. It provides a good overview of concepts related to internal controls and managerial accounting from an IT perspective. However, it spends too much time on the specifics of SQL and Microsoft Access databases. A significant portion of the book contains references and information concerning those topics, but not enough detail to learn how to use them. It seemed pointless. Either include enough information to allow readers to start to use those tools, or limit the information to just an overview of what Access and SQL do.
