By Chelsea K.

I bought this book for veterinary school as it was a required textbook. I was so pleased to find this on amazon as it is much more expensive to buy in the bookstore. I really enjoyed this book.

As far as medical books go, I thought this one was easy to understand. It does a great job at explaining things and was a perfect supplementation to my class. This really help understand lectures and notes. It helped even more when I needed to study for the test as this is what I reference the most. I was very pleased by the book.

10 of 10 people found the following review helpful.

an atlas with great pictures and concise text

By A Customer

This atlas provides wonderful full color pictures of cells and tissues from several animal groups. The pictures are logically grouped by tissue type with examples from different species being shown together. Many of the sections have brief, but useful introductions. All the pictures are well labeled and have a brief discription of important characteristics of the specific cells or tissue types presented.

It likely to be useful to individuals working in veterinary science, animal science or animal research.

8 of 8 people found the following review helpful.

What a book!!!

By Andres Sanchez - Second year veterinary student

An amazing book with great colorful pictures. It begins from how to prepare histologic sections to the description of the most important tissues, organs and systems of eight species (dog, cat, horse, cow, sheep, goat, pig, and chicken). Before the pictures, the book gives you a very useful and brief chapter introduction. It also has a detailed glossary containing nearly 750 words. A necessary book for a veterinary student. El mejor libro de histologia veterinaria que he visto!
