EINSTEIN, POLANYI, AND THE LAWS OF NATURE BY LYDIA JAEGER PDF

What is the relationship between religious belief and the study of nature, between theology and science? This is the fundamental preoccupation of the three different studies brought together in Einstein, Polanyi, and the Laws of Nature.

By exploring the highly original yet little known thought of Michael Polanyi, Jaeger highlights the inherent personal investment in any quest for knowledge, including the scientific enterprise, thus raising the question of the objectivity of human knowledge. Considered to be the greatest mind of the twentieth century, Albert Einstein saw scientific research as the fruit of the “cosmic religion.” His response to the question of the relationship between faith and science also receives the close analysis it deserves. Finally, Jaeger is interested in science’s propensity to use the concept of laws of nature, a concept also found in the Bible. By examining the similarities and differences, she paves the way for interdisciplinary dialogue.

The synthesis of these three complimentary studies brings out the complicity between belief and knowledge, thus establishing a bridge between two noble human activities: faith and scientific research. It will be of interest to all serious followers of the ongoing science and religion dialogue.
